Glossary

This glossary explains terms used in the 2011 Census by the Office for National Statistics (ONS). ONS is responsible for the Census in England and Wales. Technical information on relevant terms can be found in the 2011: Definitions available at www.ons.gov.uk/ons/guide-method/census/.

Accommodation type

The type of accommodation used or available to use by an individual household. It includes:

- Detached
- Semi-detached
- Terraced (includes end of terrace)
- Flat, maisonette or apartment includes those in purpose built blocks, part of a converted or shared house (including bedsits) and in commercial buildings
- Caravan or other mobile or temporary structure

Ethnic Group

Ethnic group classifies people according to their own perceived ethnic group and cultural background.

- **Black and minority ethnic groups (BME)** includes all groups apart from white English/Scottish/Welsh/Northern Irish. So it includes white Irish, white gypsies and travellers and other white groups
- **Country of Birth (Non-UK)** includes anyone not born in England, Northern Ireland, Scotland or Wales.

General health

General health is a self-assessment of a person's general state of health. People were asked to assess whether their health was very good, good, fair, bad or very bad. This assessment is not based on a person's health over any specified period of time.

- **Not good health** is defined as those who assessed their health as fair, bad or very bad. As these options are different to the 2001 Census options, the results cannot be directly compared.

Household

A household is defined as:

- one person living alone, or
- a group of people (not necessarily related) living at the same address who share cooking facilities and share a living room or sitting room or dining area.

This includes:

- sheltered accommodation units in an establishment where 50 per cent or more have their own kitchens (irrespective of whether there are other communal facilities)
- all people living in caravans on any type of site that is their usual residence. This will include anyone who has no other usual residence elsewhere in the UK.

A household must contain at least one person whose place of usual residence is at the address. A group of short-term residents living together is not classified as a household, and neither is a group of people at an address where only visitors are staying.

It does not include residents in a communal establishment.

Household resident

A household resident is a person whose place of usual residence is in an individual household, and not within managed residential accommodation in a communal establishment.

Household size

The size of a household is equal to the number of usual residents in the household. Visitors staying at an address do not contribute to that household's size because they are counted in the household of their place of usual residence. Household size is only applicable to occupied household spaces.

- **Average (mean) household size** is the number of people living in households divided by the number of occupied household spaces.

Household space

A household space is the accommodation occupied by an individual household or, if unoccupied, available for an individual household. The number of occupied household spaces in an area is the same as the number of households.

Households with dependent children

A dependent child is a person aged 0 – 15 in a household (whether or not in a family) or aged 16 – 18 in full-time education and living in a family with his or her parent(s). It does not include any children who have a spouse, partner or child living in the household.

Households without cars or vans

Households that do not own, or have access to, cars or vans for private use.

Language

Proficiency in English language classifies people whose main language is not English (or not English or Welsh in Wales) according to their ability to speak English. A person is classified in one of the categories:

- can speak English very well
- can speak English well
- cannot speak English well
- cannot speak English at all

Residents aged 3 or more where English is not their main language and who cannot speak English well or at all are shown in this Atlas.

Lone parent family

A lone parent family consists of a father or mother with his or her child(ren) where the parent does not have a spouse, same-sex civil partner or partner in the household and the child(ren) do not have a spouse, same-sex civil partner or child in the household. A lone grandparent with his or

her grandchild(ren) are also considered a lone parent family if there are no children in the intervening generation present in the household (note that children of the grandparent may also be present if they are not parents or grandparents of the youngest generation).

Lone parent household

A household that comprises a lone parent family and no other person.

Lone pensioner households

A one person household where the person is aged 65 years or older.

Long-term health problem or disability

A long-term health problem or disability that **limits a person's day-to-day activities**, and has lasted, or is expected to last, at least 12 months. This includes problems that are related to old age. People were asked to assess whether their daily activities were limited a lot or a little by such a health problem, or whether their daily activities were not limited at all. People whose daily activities were limited in any way were included in this Atlas.

No qualifications

Those aged 16 or over who have no academic or professional qualifications. In 2001 this was reported for those aged 16-74 and so the results are not directly comparable.

Population density

Population density is the number of usual residents per hectare. A hectare is the metric unit of area defined as 10,000 square metres or approximately 2.47 acres.

Unemployed

A person aged 16 to 74 is classified as unemployed if they are not in employment, are available to start work in the next two weeks, and either looked for work in the last four weeks or are waiting to start a new job.

A person is defined as **long-term unemployed** at the time of the 2011 Census if they were unemployed and the year they last worked was 2009 or earlier. So they had been unemployed for at least 15 months.

Owner occupied

Includes property owned outright or with a mortgage or loan. It does not include shared ownership (i.e. part owned, part rented property.)

Travel to work

The method of travel used for the longest part, by distance, of the usual journey to work. This topic is only applicable to people who were in employment in the week before the Census (this includes those who work mainly at or from home).

- By car or van includes drivers or passengers but excludes taxis
- Public transport includes train, bus, minibus, coach, underground, metro, light rail and tram. It excludes taxis.

This Ward Atlas uses table QS701EW to report travel to work results from the 2011 Census. These results are not directly comparable with 2001 Census results (as the 2001 Census tables excluded people who worked from home in the base for percentages). There is another 2011 Census table, CT0015EW that allows comparison with the 2001 Census results, but it only goes down to local authority level.

Unpaid care provider

A person is a provider of unpaid care if they look after or give help or support to family members, friends, neighbours or others because of long-term physical or mental ill health or disability, or problems related to old age. This does not include any activities as part of paid employment.

No distinction is made about whether any care that a person provides is within their own household or outside of the household, so no explicit link can be made about whether the care provided is for a person within the household who has poor general health or a long-term health problem or disability.

Usual resident

The main population base for outputs from the 2011 Census is the usual resident population as at Census day 27 March 2011. Although the population base for enumeration included non-UK short-term residents, this population is analysed separately and is not included in the main

outputs from the 2011 Census. All outputs, unless specified, are produced using only usual residents of the UK.

For 2011 Census purposes, a usual resident of the UK is anyone who, on Census day, was in the UK and had stayed or intended to stay in the UK for a period of 12 months or more, or had a permanent UK address and was outside the UK and intended to be outside the UK for less than 12 months.

Please note that, following ONS' approach, comparisons with 2001 population are with the 2001 mid-year estimates rather than the 2001 Census results.
