---

I object to the proposed plan for these reasons:

I am concerned that there will be 20,000 plus houses built over the next 20 years. Which will create at least 40,000 plus new residents and a family on average will have two cars. This will create pollution, noise and a strain on local amenities, our over stretched health care services, and maternity services. The impact on wild life in and around the surrounding areas is also a concern.

Firstly I am concerned about the strain it will put on the already strained Warrington Hospital. There will be at least another 40,000 people using our services, as it is, the Hospital already as a problem with beds, operations, cancelled operations, treatments etc. so how can it support another extra 40,000 plus people. You haven't announced you going to build a new Hospital so how are you going to cope with this increase.

The Health Facilities you are proposing will not be enough to take care of all their needs.

We don't need a Garden City, I already have on my door step, I can walk to the Pennine trail, the canal and all the green belt that surrounds my home. This Garden City is to replace the Green Belt land you are proposing to build on.

My house runs parallel with Stockport Road, if you were to site a major road adjoining this, the pollution would be a major concern to my health and others. The noise level would also increase. I can hear the M6 motorway from my house already and it must affect the air pollution in my area, add to this the siting of a new major road so close to my house it would add to the pollution, health issues and noise.

This proposed plan would be at the expense of the people that live close or surround the areas affected, you have not taken into consideration the impact it would have on them, their lives and the stress this would cause them.
