Subject: Proposed local plan for Warrington
Date: 13 June 2019 13:26:13

Hi

The proposed building of 5000 houses in Appleton is misguided because the already over crowded A49 road through Stockton Heath will become completely grid locked at peak times At the moment this problem exist on a Friday afternoon when the bus services to Appleton and the surrounding neighbour hood cannot operate to the schedules because of traffic grid lock The buses are always over half an hour late and as such services are regularly cut because of this lateness

This situation will become the norm for all days and at all times

Also when there is a closure of any of the motorways the A49 becomes parking lot

Just imagine the consequences of building another 5000 houses on this situation when it will become the norm for drivers of cars stranded and having to sleep overnight

Also the building of 5000 houses will on impact wildlife and all the essential services such as water electric and gas supply together with additional treatment of sewerage and rainfall

Subject: Ring road to alleviate traffic congestion in Socket Heath
Date: 13 June 2019 14:04:35

The building of 5000 more houses in Appleton will create a major traffic problem and will require a ring road to by pass Stockton Heath This needs to be located at the M56 motorway exit to Warrington and skirt round the outskirts of the town to link up on the northerside for access to the town centre
