My feedback on the plan is as follows:

Cars are dominant because there is insufficient public transport both within Warrington and beyond (links to Manchester, Liverpool and Chester are wholly inadequate). None of this is addressed with any force within the plan, and so congestion and air quality will deteriorate further.

To go into green belt land is disgusting when the need for these houses is merely a forecast figure. What is the plan when there is no green belt left and the air is even worse than it is now??? The provision of affordable housing will never become a reality.

The council have a responsibility to care for the town not to indiscriminately build and destroy the environment. This plan does just that, justified by vague forecasts and empty promises to protect 'new' green belt boundaries.
