Response 831

Respondent Details

PART A - About You

1. Please complete the following: Please note the email address (if provided below) will be sent a full copy of the submitted response and a unique ID number for future reference (pdf attachment).

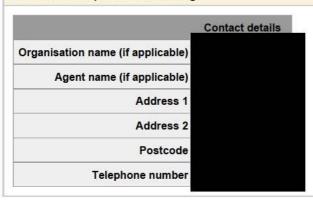

Name of person completing the form: Kathryn Warren

Email address:

2. What type of respondent are you? Please select all that apply.

A local resident who lives in Warrington

3. Please complete the following:

PART B - Representation Form 1

1. To which part of the Local Plan does this representation relate? From the drop down list please select one option.

Draft Local Plan (as a whole)

2. Does your comment relate to a specific paragraph (s) or policy sub-number (s)? Please select one option.

None of the above

3. Do you consider the Draft Local Plan is: Please select one option in each row.

	Yes	No
Legally Compliant		X
Sound		X
Compliant with the Duty to Co-operate		X

- 4. If you have answered 'No' to any of the options in the above question then please give details in the box below of why you consider the Draft Local Plan is not legally compliant or is unsound or fails to comply with the duty to cooperate. Please be as precise as possible.
- 1. Council traffic planners have confirmed LPT4 as a 'concept' aspirational document which only outlines some options and preferences. Therefore it lacks important detail for residents to make real informed judgments. The schemes, or possible schemes, listed in the LPT4 will cost a very significant sum. Given the pressures on overall UK public expenditure, and specific pressures on the Department for Transport there is little prospect that no more than a very small fraction of Government subsidy will be realised within the timescale of the PSV Local Plan period. Almost all of the LTP4 is an aspirational wish list and no timescales whatsoever are offered regarding delivery. Therefore the Council should not commit to large scale development in the South of Warrington until they achieve certainty of the necessary transport infrastructure.
- 2. Air Quality is a major issue in Warrington with the Town identified by the World Health Organisation as being in the top 5 Towns/ Cities in England that exceeds the pollutants limit. It is therefore very likely that the proposed new housing in South Warrington (circa 7000 dwellings), Six/56 and Stobart's developments will have a deleterious effect upon air quality and noise, particularly in existing congested locations such as Stockton Heath high street and Latchford village.
- 3. No credible strategy is being put forward as to how existing highway congestion pinch points are to be relieved. These include Stockton Heath High Street, Stockton Heath swing bridge, Lumb brook underpass bridge, Knutsford road bridge, and the latchford/kingsway gyratory. The effects of the increased domestic and commercial traffic on the existing highway infrastructure will be enormous I.e. A49,A50,A56 bringing increased pollution, noise,and congestion.
- 4. LTP4 (apart from the Western link which adds little or no benefit for the majority South Warrington commuters)excludes any significant improvements or forward investment in the South of Warrington highway infrastructure the existing roads and bridge crossings of all three waterways (Bridgewater canal, Manchester Ship Canal and the river Mersey). Congestion at these key points will only get worse resulting in more pollution and potential Health issues.
- 5. There appears to be no coherent strategy for managing any adverse effects from increased HGV movements, including those that would result from the enhancement of Port Warrington, proposed Six/56 employment Park, proposed Stobart's national distribution centre, and Warrington Business Park developments etc. There is no Rail or Water access to either of the Six/56 and Stobart's, which will inevitably strengthen the focus of freight movement exclusively upon road vehicles. Both schemes contravene the Councils and Government policy in regards to supporting Rail freight and sustainable use of existing waterways I.e. Manchester Ship Canal.
- 6. The Councils traffic model is unrealistic it assumes that the swing bridges are continually in place and do not open. Also their age could be a serious issue in the future due to increased openings and traffic usage. The model also makes no allowance for disruptive road works anywhere in the Borough, which is both illogical and unrealistic.
- 7. The concept of a Mass Transit System (MTS) is floated in the LPT4, however it is clear from the documentation that the concept of developing a MTS is at a very early stage with little serious work having been undertaken, therefore it is unwise for the Council to put forward such a scheme without having carried out the necessary background work to establish its viability.
- 8. There is no clear strategy that ensures traffic generated by the Garden Suburb (Housing and Neighbourhood Centre) will not have an adverse impact on the local community. The effects on the current highway infrastructure will be enormous I.e. A49, A56, A50 in particular Stockton Heath High Street, Stretton Village, Grappenhall Road, London Road, Lumb Brook under bridge, Wilderspool Causeway and Latchford Village. There is also no evidence to support the assumption that the proposed Garden Suburb Southern Strategic Link Road will reduce traffic travelling from Stockton Heath via the A49 to the M56-J10.
- 9. Council Officers have repeatedly stated that the Garden Suburb Southern Strategic Link Road is only illustrative, however it's currently indicates a new traffic junction on the A49 (between the Cat and Lion Junction and the M56-J10, this suggestion will undoubtedly cause severe traffic congestion. This matter requires a fundamental review with Highways England, as this adhoc illogical solution has the potential to create serious traffic congestion problems, particularly on the M56-J10 at peak periods.
- 10. The success of LTP4 is dependent on securing significant changes in Public behaviour, including walking, cycling and bus patronage. No evidence is offered, other than optimistic hope that these changes of mode, away from car usage, will in fact occur. The LPT4 also envisages tripling local public transport use during the Local Plan period. However, bus use has fallen by almost 50% over the past decade, therefore this laudable aspiration is very likely to be unattainable due to high car ownership, Town Centre retail decline, traffic congestion resulting in lack of certainty and reliability, relatively high fares
- 11. The LPT4 makes no reference to replacing or undertaking a major review of the Three 19th century swing bridges (125 year old), therefore how credible/ viable is a Transport Plan that fails to address the Councils reliance on a Victorian infrastructure that is controlled entirely by a Third Party whilst proposes unprecedented large scale housing and employment developments without any surety of the necessary highway infrastructure to serve the resultant increase in traffic
- 12. The conceptual high level Cantilever Bridge replacement is only planned for the medium term which will present major planning problems. In addition the PSV Local Plan indicates safeguarded land adjacent to the weight restricted Cantilever Bridge. An unanswered serious question is what will the new Bridge be design to carry I.e. HGV's or Light Traffic as currently? There has been no regard given to necessary highway infrastructure and this is a major omission and is of Public concern.

7. If your representation is seeking a modification, do you consider it necessary to participate at the oral part of the examination? Please select one option.

No, I do not wish to participate at the oral examination

You have just completed a Representation Form for Draft Local Plan (as a whole). What would you like to do now? Please select one option.

Complete the rest of the survey (Part C)
